

Siddhaarth B S

siddhaarth09@gmail.com +91 7892926651 github.com/siddhaarthaa LinkedIn

Summary

Computer Science student focused on backend and systems engineering, with hands-on experience building reliable backends, debugging complex codebases, and authoring Dockerized evaluation environments. Skilled in Go, TypeScript, Node.js, PostgreSQL, Linux, and distributed systems fundamentals.

Education

IIIT Dharwad — B.Tech in Computer Science, Dharwad, Karnataka, India 2023–2027

Experience

Shipd AI, Datacurve *AI Engineer, Team Terminus*

Contract Contributor

Mar 2026 – Present

- Built containerized evaluation environments for AI software agents, modeling realistic debugging and code-repair scenarios across broken repositories.
- Engineered automated verification workflows to measure solution correctness, robustness, and regression resistance at scale.
- Defined high-signal benchmark tasks that improved evaluation quality for agent reasoning, failure recovery, and code-generation reliability.

Tiled Map Editor (C++/Qt)

Open Source Contributor

View Pull Requests

2026 – Present

- Contributed 6+ pull requests to the Tiled Map Editor (12k+ GitHub stars), with multiple PRs merged into the mainline codebase.
- Implemented contiguous selection logic and fixed export/tool-state edge cases in a large C++ / Qt desktop codebase with shared editor state.

Projects

OpenLedger – Digital Wallet Platform

GitHub

- Built a wallet platform backend in TypeScript using Express, Prisma ORM, and PostgreSQL with a monorepo architecture, supporting multi-user concurrent operations.
- Designed idempotent settlement logic, async deposit flows, and atomic balance guards to prevent duplicate credits and race-condition overdrafts.

eBPF Sentinel

GitHub

- Built a Go + eBPF kernel observability agent attaching probes to `accept/connect/exec/read/write` syscalls with minimal overhead by keeping logic in kernel-space ring buffers.
- Reconstructed L7 HTTP flows from raw events, added policy-based anomaly detection, and exported enriched telemetry via OTLP and Prometheus.

Achievements

- Secured under 3,000 rank in KCET and COMEDK; scored 96 percentile in JEE Main.
- Solved 500+ data structures and algorithms problems across coding platforms.
- Delivered 50+ video editing, VFX, and motion graphics projects for 25+ international clients while maintaining a 5-star Fiverr rating.

Skills

Languages: C++, TypeScript, JavaScript, Go, Python, SQL, C

Backend & Systems: Node.js, Express, REST APIs, JWT, Prisma ORM, eBPF, Linux internals, Shell scripting

Observability: Prometheus, OpenTelemetry (OTLP), Jaeger

Databases: PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, RDS, S3), Docker, Kubernetes, Linux

Tools: Git, GitHub Actions, Postman, Nginx, Cloudflare
