Education

IIIT Dharwad — B.Tech in Computer Science, Dharwad, Karnataka, India

2023–2027

Experience

Shipd AI, Datacurve

AI Engineer, Team Terminus

Contract Contributor

Mar 2026 – Present

- Built 5 accepted containerized software-evaluation environments, converting broken repositories into reproducible debugging and code-repair tasks.
- Developed deterministic validation workflows to assess fix correctness, regression safety, and failure recovery, improving reliability and consistency across evaluations.
- Translated ambiguous engineering failures into structured tasks and success criteria, balancing product quality, debugging depth, and end-to-end correctness.

Tiled Map Editor (C++/Qt)

Open Source Contributor

View Pull Requests

2026 – Present

- Authored 8 pull requests, including 5 merged changes, to Tiled Map Editor (12k+ GitHub stars), fixing synchronization, export, translation, and selection behavior in a large C++ / Qt codebase.
- Implemented contiguous selection for Bucket Fill and Magic Wand tools and resolved shared editor-state inconsistencies across multi-instance workflows, improving feature correctness and usability.

Projects

OpenLedger – Digital Wallet Platform

GitHub

- Built a wallet backend in TypeScript using Express, Prisma ORM, and PostgreSQL, supporting concurrent account operations in a monorepo architecture.
- Designed idempotent settlement logic, async deposit flows, and atomic balance guards to preserve transactional correctness and prevent race-condition overdrafts.

eBPF Sentinel

GitHub

- Built a Go + eBPF observability agent instrumenting 5 kernel syscalls and reconstructing L7 HTTP request-response flows from ring-buffer events.
- Added policy-based anomaly detection for unauthorized egress, privileged-port access, and exec violations, and exported enriched telemetry via OTLP and Prometheus.

Achievements

- Secured under 3,000 rank in KCET and COMEDK; scored 96 percentile in JEE Main.
- Solved 500+ data structures and algorithms problems across coding platforms.

Skills

Languages: C++, Go, Python, TypeScript, JavaScript, SQL, C

Backend & Systems: Node.js, Express, REST APIs, Prisma ORM, eBPF, Linux internals, Shell scripting, Concurrency, Object-Oriented Design

Observability: Prometheus, OpenTelemetry (OTLP), Jaeger

Databases: PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, RDS, S3), Docker, Kubernetes, Linux

Tools: Git, GitHub Actions, Postman, Nginx, Cloudflare
